SITE DESCRIPTION

Originally Cape Dutch, after late 19th century fire the roof was replaced with an enormous overall pitched roof with ridge running from front to back gables. Gable (1827) outlines still visible. Several other alterations. Mature oaks.

STATEMENT OF SIGNIFICANCE

This is an interesting werf, and a good example of a layered site. The earlier homestead and its gables were incorporated into a large, double pitched end gable following a fire, and the werf, although modernised, follows the historic pattern and retains fragments of older walls. The site is highly layered, and has a high degree of historic and architectural significance. In addition, the werf has scenic and contextual significance.
